

**NAME**

curl\_slist\_append - add a string to an slist

**SYNOPSIS**

```
#include <curl/curl.h>
```

```
struct curl_slist *curl_slist_append(struct curl_slist *list, const char * string);
```

**DESCRIPTION**

curl\_slist\_append() appends a specified string to a linked list of strings. The existing *list* should be passed as the first argument while the new list is returned from this function. The specified *string* has been appended when this function returns.

**RETURN VALUE**

A null pointer is returned if anything went wrong, otherwise the new list pointer is returned.

**SEE ALSO**

curl\_slist\_free\_all(3),

**BUGS**

Surely there are some, you tell me!
